

Gary Hyde

Full Stack Software Engineer Winter Garden / Orlando, FL | gary.robert.hyde@gmail.com | (407) 473-7206 | jobs.garyhyde.com/tailscale/full-stack-software-engineer

Summary

Full-stack engineer who builds production React and TypeScript frontends backed by APIs, schemas, and background-job systems I design and own myself. 10+ years shipping web products, much of it remote and written-first, where the work moves through clear docs, clean commits, and code rather than meetings. I write strongly typed React and TypeScript on the frontend and own the backend behind it on Node, Express, and PostgreSQL, designing REST APIs and Redis-backed queues end to end. I am comfortable in unfamiliar systems and pick up new backend languages quickly, and I lean on AI tooling as a force multiplier that lets me move fast across the whole stack without dropping quality. I work best with autonomy: given a problem and a doc, I scope it, build it, and ship it.

Core Skills

React, TypeScript, Next.js 14 (App Router), Node.js, Express, REST APIs, web and admin console UIs, PostgreSQL, schema design, Redis, BullMQ, webhook architecture, Auth.js v5, Zod, Tailwind CSS, shadcn/ui, async written-first collaboration, autonomous end-to-end ownership, AI-native development, automated code-review tooling, Git, Vercel, Railway, Docker-style cloud deploys

Experience

SENIOR FULL-STACK DEVELOPER, FORWARD THINKING MARKETING (CHRONIC GURU)

Oct 2023 - May 2026

- Lead developer owning the full technical stack, from PostgreSQL schema and REST API design through the React and Node tooling and the storefronts running on top of it.
- Owned features end to end with little oversight, scoping the work, building both the API and the React interface, and shipping it, the way an async team needs people to operate.

- Set the team's AI-native development standard, introducing AI into the team's default way to build and sharply compressing feature delivery while holding code quality and documentation high.
- Built and shipped automated AI code-review tooling that synthesizes outputs from multiple AI models into structured Ship/Fix/No-Ship scorecards, raising the team's human-in-the-loop review bar.
- Designed a custom Git commit convention (Mission Codes) for multi-developer cloud environments, improving traceability and reducing friction across the team.
- Architected and maintained multi-system integrations across order pipelines and inventory sync, resolving complex cross-platform bugs at the data layer where consistency mattered most.

LEAD DEVELOPER, GARY HYDE DEVELOPMENT (INDEPENDENT)

Jan 2013 - Present

- Built multi-tenant SaaS platforms on Next.js 14 App Router and TypeScript with Express, PostgreSQL and Drizzle ORM, BullMQ/Redis job queues, and Auth.js v5, production-architected and cloud-deployed from day one.
- Designed REST APIs, database schemas, and background-job systems end to end, then carried them through to performant React frontends, owning every layer myself.
- Worked fully independently across a varied client base, managing scope, architecture, and delivery on my own and communicating in writing rather than standups.
- Developed a direct booking platform with guest-facing portals, Stripe + Stripe Tax integration, webhook handling, and review workflows.

CO-OWNER / E-COMMERCE OPERATOR, POSH LOVE

Feb 2015 - Present

- Co-founded and run a custom-product e-commerce business, owning the storefront, infrastructure, fulfillment, and marketing end to end.

WEB DEVELOPER, AAA (CONTRACT)

Aug 2012 - Jan 2013

- Diagnosed and resolved bugs in a next-generation roadside-assistance dispatch platform alongside the QA team.

Notable Projects

PATHARA, AI AGENT JOB-SEARCH PLATFORM (GETPATHARA.COM)

A self-service product where candidates submit a resume and questionnaire, and an automated AI agent pipeline returns ranked job matches with a tailored resume, cover letter, and interview prep for each match, plus an application tracker.

- **Stack:** Next.js (App Router), TypeScript, Vercel, Supabase (auth, Postgres with row-level security, storage), managed AI agents, PostHog
- **Highlights:** Built the full pipeline end to end, with per-candidate data isolation, per-run cost and token telemetry, and a managed-agent design that runs without self-hosted workers

TEETIMES, MULTI-TENANT SAAS BOOKING PLATFORM

OpenTable-inspired tee-time booking SaaS for golf country clubs, built engine-first with a multi-tenant architecture.

- **Stack:** Next.js 14 App Router, TypeScript, React, Express, PostgreSQL + Drizzle ORM, Auth.js v5, BullMQ + Redis, Zod, Tailwind CSS, shadcn/ui
- **Highlights:** Strongly typed React frontend over a Redis-backed job system, multi-tenant data isolation, and an AI agent-ready workflow with a TDD task structure driving the build

MULTI-MODEL AI CODE-REVIEW TOOLING

A team-facing review system that fans a diff out to multiple AI models and synthesizes their findings into one structured scorecard with a Ship/Fix/No-Ship verdict.

- **Stack:** Multiple AI models, multi-model orchestration, structured scorecard output
- **Highlights:** Turned ad-hoc AI review into a repeatable, auditable workflow that raised the bar for the whole team

Education

B.S. Web Design and Development, Full Sail University
A.S. Computer Programming, Valencia Community College
