

Gary Hyde

Senior AI Engineer Winter Garden / Orlando, FL | gary.robert.hyde@gmail.com | (407) 473-7206
| jobs.garyhyde.com/grafana-labs/senior-ai-engineer

Summary

AI engineer who builds production agent tooling and multi-model AI systems, not slideware. I designed and shipped a team-facing review system that fans a single diff out to multiple AI models and synthesizes their findings into one structured Ship/Fix/No-Ship scorecard, turning ad-hoc AI review into a repeatable, auditable workflow. 14+ years of full-stack engineering across Python, JavaScript/Node.js, and modern web systems give me the foundation to wire agents into real infrastructure: APIs, data layers, and queues. I have built AI into my daily workflow since the tools became usable, building multi-step agent workflows, and I run almost entirely autonomous and async: I take an ambiguous AI problem, scope it, and carry it to production on my own. Remote-first by habit, biased toward clean code and shipping.

Core Skills

Python, JavaScript / Node.js, multi-agent architectures, multi-model output synthesis, AI tool integration, agent workflows, prompt engineering, agent orchestration patterns, automated AI code-review tooling, vector-search and retrieval concepts, REST APIs, PostgreSQL, Redis, BullMQ, webhook architecture, TypeScript, Next.js, autonomous async delivery, Git

Experience

SENIOR FULL-STACK DEVELOPER, FORWARD THINKING MARKETING (CHRONIC GURU)

Oct 2023 - May 2026

- Built and shipped automated AI code-review tooling that fans a diff out to multiple AI models and synthesizes their outputs into one structured Ship/Fix/No-Ship scorecard, raising the team's human-in-the-loop review bar.
- Set the team's AI-native development standard, introducing AI into the team's default way to build and designing the multi-step agent workflows other developers worked inside of.
- Owned the full technical stack independently, from data schema and API design through the Node tooling and storefronts running on top of it, working async without waiting on direction.

- Architected and maintained multi-system integrations across order pipelines and inventory sync, resolving complex cross-platform bugs at the data layer.
- Designed a custom Git commit convention (Mission Codes) for multi-developer cloud environments, improving traceability and reducing friction across the team.
- Investigated and authored a detailed multi-system stock-overselling incident report, tracing a critical inventory bug to root cause across two platforms.

LEAD DEVELOPER, GARY HYDE DEVELOPMENT (INDEPENDENT)

Jan 2013 - Present

- Built multi-tenant SaaS platforms on Next.js 14 App Router with Express, PostgreSQL, BullMQ/Redis job queues, and Auth.js v5, production-architected and cloud-deployed from day one.
- Designed REST APIs, database schemas, and background-job systems end to end, the same plumbing AI agents and tools have to run against in production.
- Built agent-ready development workflows around AI tooling, structuring tasks so AI tooling could drive real implementation rather than just autocomplete.
- Delivered full-stack solutions across e-commerce, hospitality, professional services, and SaaS, owning scope, architecture, and delivery entirely on my own.

CO-OWNER / E-COMMERCE OPERATOR, POSH LOVE

Feb 2015 - Present

- Co-founded and run a custom-product e-commerce business, owning the storefront, infrastructure, fulfillment, and marketing end to end.

WEB DEVELOPER, AAA (CONTRACT)

Aug 2012 - Jan 2013

- Diagnosed and resolved bugs in a next-generation roadside-assistance dispatch platform alongside the QA team.

Notable Projects

PATHARA, AI AGENT JOB-SEARCH PLATFORM (GETPATHARA.COM)

A self-service product where candidates submit a resume and questionnaire, and an automated AI agent pipeline returns ranked job matches with a tailored resume, cover letter, and interview prep for each match, plus an application tracker.

- **Stack:** Next.js (App Router), TypeScript, Vercel, Supabase (auth, Postgres with row-level security, storage), managed AI agents, PostHog
- **Highlights:** Built the full pipeline end to end, with per-candidate data isolation, per-run cost and token telemetry, and a managed-agent design that runs without self-hosted workers

MULTI-MODEL AI CODE-REVIEW TOOLING

A team-facing review system that fans a diff out to multiple AI models and synthesizes their findings into one structured scorecard with a Ship/Fix/No-Ship verdict.

- **Stack:** Multiple AI models, multi-model orchestration, structured scorecard output
- **Highlights:** Turned ad-hoc AI review into a repeatable, auditable, multi-agent workflow that raised the bar for the whole team

TEETIMES, MULTI-TENANT SAAS BOOKING PLATFORM

OpenTable-inspired tee-time booking SaaS for golf country clubs, built engine-first with a multi-tenant architecture and an AI agent-ready workflow.

- **Stack:** Next.js 14 App Router, TypeScript, Express, PostgreSQL, BullMQ + Redis, Zod, Tailwind CSS
- **Highlights:** Redis-backed background jobs, multi-tenant data isolation, and a TDD task structure that AI agents could drive

Education

B.S. Web Design and Development, Full Sail University
A.S. Computer Programming, Valencia Community College
