

Gary Hyde - Senior Product Engineer Application

Winter Garden / Orlando, FL | gary.robert.hyde@gmail.com | (407) 473-7206 jobs.garyhyde.com

Dear Ashby Hiring Team,

I am applying for the Senior Product Engineer role, and what made me stop and read the whole posting was how close Ashby sits to the product I just built. I made Pathara, an AI product that runs the job search for candidates: an AI agent pipeline that turns a resume into ranked job matches with tailored materials. Ashby is all-in-one recruiting software with AI woven into every layer. I have been building in exactly this AI-for-hiring space, just from the candidate side, so the direction you are pushing is one I understand deeply and am genuinely excited to work on from the other seat.

The way you work also matches the way I already work: end-to-end TypeScript, React on the frontend and Node on the backend, GraphQL over PostgreSQL with Redis where it earns its place, and senior engineers trusted to take a feature from the schema to the UI on their own. That is my normal week, not a stretch I would grow into. Hand me a problem and I take it the whole distance, the table design, the API, the React, the edge cases, the deploy, without a separate backend or design resource standing by.

A couple of concrete examples. TeeTimes is a multi-tenant SaaS where I designed the tenant-scoped PostgreSQL schema with Drizzle and ran background jobs through BullMQ on Redis, so the data layer and the queueing layer are both places I work directly. Pathara sits on a Postgres data layer with the AI agent pipeline behind it and a candidate-facing portal in front, again owned end to end. Across both, the typed contract between client and server is the discipline I lean on hardest, which is exactly what GraphQL formalizes.

Ashby being async-first and almost meeting-free reads as a feature to me. I have built independently and remotely for over a decade, so the specs and review notes I leave behind let a distributed team act without a call, and I have built AI into my daily workflow since the moment the tools became usable, which frees my time for the work that actually needs judgment.

Happy to talk - [Book a call](#)
