

Gary Hyde

Staff Product Engineer Winter Garden / Orlando, FL | gary.robert.hyde@gmail.com | (407) 473-7206 | jobs.garyhyde.com/ashby/staff-product-engineer

Summary

Full-stack product engineer who designs and ships end-to-end TypeScript systems on React, Node, and PostgreSQL, owning everything from schema and API design through to the polished frontend running on top of it. 10+ years building web products, including multi-tenant SaaS platforms architected for scale from day one. I run almost entirely on autonomous, asynchronous execution: I pick up ambiguous problems, scope them, and carry them to production without needing a meeting to get unblocked. I have built AI into my daily workflow since the tools became usable, treating it as a force multiplier that raises throughput and quality at once. That fit is not abstract for me: I built Pathara, an AI product that runs the job search for candidates, so Ashby's all-in-one recruiting platform with AI embedded in every layer is exactly the kind of product I want to help build. Remote-first by habit, biased toward clean code, self-directed ownership, and shipping.

Core Skills

TypeScript (end to end), React, Node.js, Express, GraphQL, REST APIs, PostgreSQL, Drizzle ORM, Redis, BullMQ, Next.js 14 (App Router), Auth.js v5, Zod, webhook architecture, schema modeling, background-job systems, autonomous async delivery, AI-native development, Tailwind CSS, shadcn/ui, Vercel, Railway, Docker, Git

Experience

SENIOR FULL-STACK DEVELOPER, FORWARD THINKING MARKETING (CHRONIC GURU)

Oct 2023 - May 2026

- Lead developer owning the full technical stack independently, from PostgreSQL schema and API design through the React/Node tooling and the storefronts running on top of it.
- Worked async and self-directed across a multi-developer environment, scoping ambiguous problems and carrying them to production without waiting on direction.

- Architected and maintained multi-system integrations across order pipelines and inventory sync, resolving complex cross-platform bugs at the data layer where consistency mattered most.
- Introduced AI into the team's default way to build, sharply compressing feature delivery while holding code quality and documentation standards.
- Designed a custom Git commit convention (Mission Codes) for multi-developer cloud environments, improving traceability and reducing friction across the team.
- Investigated and authored a detailed multi-system stock-overselling incident report, tracing a critical inventory bug to root cause across two platforms.

LEAD DEVELOPER, GARY HYDE DEVELOPMENT (INDEPENDENT)

Jan 2013 - Present

- Built multi-tenant SaaS platforms on Next.js 14 App Router and TypeScript with Express, PostgreSQL and Drizzle ORM, BullMQ/Redis job queues, and Auth.js v5, production-architected and cloud-deployed from day one.
- Designed REST APIs, database schemas, and background-job systems end to end, then carried them through to performant, polished frontends, owning every layer of the architecture.
- Developed a direct booking platform with guest-facing portals, Stripe + Stripe Tax integration, webhook handling, and review workflows.
- Delivered full-stack solutions across e-commerce, hospitality, professional services, and SaaS, owning scope, architecture, timelines, and delivery entirely on my own.

CO-OWNER / E-COMMERCE OPERATOR, POSH LOVE

Feb 2015 - Present

- Co-founded and run a custom-product e-commerce business, owning the storefront, infrastructure, fulfillment, and marketing end to end.

WEB DEVELOPER, AAA (CONTRACT)

Aug 2012 - Jan 2013

- Diagnosed and resolved bugs in a next-generation roadside-assistance dispatch platform alongside the QA team.

Notable Projects

PATHARA, AI AGENT JOB-SEARCH PLATFORM (GETPATHARA.COM)

A self-service product where candidates submit a resume and questionnaire, and an automated AI agent pipeline returns ranked job matches with a tailored resume, cover letter, and interview prep for each match, plus an application tracker. The same AI-for-hiring space Ashby builds in, approached from the candidate side.

- **Stack:** Next.js (App Router), TypeScript, Vercel, Supabase (auth, Postgres with row-level security, storage), managed AI agents, PostHog
- **Highlights:** Built the full pipeline end to end, with per-candidate data isolation, per-run cost and token telemetry, and a managed-agent design that runs without self-hosted workers

TEETIMES, MULTI-TENANT SAAS BOOKING PLATFORM

OpenTable-inspired tee-time booking SaaS for golf country clubs, built engine-first with a multi-tenant architecture.

- **Stack:** Next.js 14 App Router, TypeScript, React, Express, PostgreSQL + Drizzle ORM, Auth.js v5, BullMQ + Redis, Zod, Tailwind CSS, shadcn/ui
- **Highlights:** Redis-backed background jobs, multi-tenant data isolation, an AI agent-ready workflow, and a TDD task structure driving the build

DIRECT BOOKING PLATFORM, SHORT-TERM RENTAL OPERATORS

Host-facing booking infrastructure with a guest portal, payments, and review collection, built and shipped solo.

- **Stack:** Node.js + Express, Next.js, TypeScript, PostgreSQL, Stripe + Stripe Tax
- **Highlights:** Stripe Tax scoped day one, webhook-driven payment flows, and a guest review pipeline carried from schema to frontend

Education

B.S. Web Design and Development, Full Sail University A.S. Computer Programming, Valencia Community College
