

Gary Hyde - Senior AI Software Engineer Application

Winter Garden / Orlando, FL | gary.robert.hyde@gmail.com | (407) 473-7206 jobs.garyhyde.com

Hiring Team,

Most engineers who say they use AI tooling mean they have a chat window open. The Internal Enablement role is about the other thing, building the tooling that makes everyone else faster, and that is the work I already reach for. I have built AI into my daily workflow since the moment the tools became usable, and the part I enjoy most is finding the friction the whole team hits and removing it once, for everyone.

The clearest example is an AI code-review system I built and run as team-facing tooling. It sends a change out for review, collects the feedback, and synthesizes the results into a single Ship, Fix, or No-Ship score-card with a human approval gate before anything lands. I also designed a custom Git commit convention that improved traceability across a multi-developer workflow. Neither was assigned. Both came from the same instinct your team is built around: spot the recurring cost, then solve it for everybody at once.

On the agent side I am hands on in production, not just in demos. Pathara is a job-search product I built around an AI agent pipeline that handles research and document generation end to end, with per-run cost and token telemetry and per-candidate data isolation. I treat the harness around the model, the tools and the verification steps, as where the quality actually comes from, and that judgment is the part of this role I most want to own.

A quick word on stack so it is honest from the start. TypeScript and Node are my core, used across every recent project. Python is a working second language for me, real integration code rather than my primary. I run the cloud patterns this work depends on in production today (serverless functions, managed Postgres, object storage, queues, webhook architecture), so transferring those instincts to AWS is a fast ramp rather than a leap. What I am most confident about is the sense for what makes a tool worth other engineers trusting.

Happy to talk - [Book a call](#)
