

# Gary Hyde - Full-Stack Software Engineer Application

Winter Garden / Orlando, FL | [gary.robert.hyde@gmail.com](mailto:gary.robert.hyde@gmail.com) | (407) 473-7206 [jobs.garyhyde.com](https://jobs.garyhyde.com)

Dear PrairieLearn hiring team,

I am applying for the Full-Stack Software Engineer role, and I will be direct about why: your stack is the one I already build on every day. Node.js and TypeScript on the server, PostgreSQL underneath, React on the frontend, AWS for infrastructure, and AI tooling woven through all of it. I have spent years on exactly this foundation, and the recent stretch has been about adding AI to the same stack rather than treating it as a separate thing.

That end-to-end ownership runs through everything I have built. For TeeTimes I designed the multi-tenant PostgreSQL data model, the Node.js and Express backend, the background job pipeline, and the React frontend, all in one TypeScript codebase. Kora took the same vertical approach for a direct booking engine: a Node.js payments and scheduling service on PostgreSQL, with Stripe and Stripe Tax scoped from day one. In both cases there was no second engineer to hand work to, so getting the schema right before anything sat on top of it was my problem, and so was the React UI that proved it.

The AI side of the role is where I think I stand out. I built Pathara end to end as an AI agent pipeline: candidates submit a resume and a short questionnaire, and the pipeline returns ranked job matches, each with a tailored resume, cover letter, and interview prep doc, plus an application tracker. I built the intake flow, the agent pipeline that does the research and writing, and the per-candidate portal on a Supabase Postgres backend with row-level security and storage. I have built AI into my daily workflow since the moment the tools became usable, including automated code-review tooling on my current team that synthesizes multiple models into structured Ship, Fix, and No-Ship scorecards. I treat these as genuine force multipliers, not autocomplete.

The shape of the team is a real draw. Small, autonomous, shipping end to end is exactly where I do my best work. I have worked independently and remotely for over ten years, scoping and shipping products solo, and I move fastest when the process is light and the trust is high. Education technology is also work I want to do, where the product actually helps the people using it learn.

Happy to talk - [Book a call](#)
