

Gary Hyde - Product Engineer Application

Winter Garden / Orlando, FL | gary.robert.hyde@gmail.com | (407) 473-7206 jobs.garyhyde.com

Dear AdventHealth Hiring Team,

I am applying for the Product Engineer role, and it reads like the work I already do: own digital products end to end, from a real user problem through design, architecture, and a shipped, trustworthy experience. I have spent more than fourteen years building that way, usually as the person responsible for the whole value chain, the schema, the API, the React interface, and the deploy.

The stack is a clean match. I work in TypeScript end to end, React and Next.js on the front, Node and PostgreSQL behind it, with Redis where it earns its place, and I move comfortably between UI and UX, API design, data modeling, and systems architecture. I also build AI into how I work and what I ship. I built Pathara, an AI product where an agent pipeline turns a resume into ranked matches with tailored materials, owned end to end from the intake flow to the results portal. Building AI-powered platforms that people actually rely on is the work I want to keep doing, and getting to do it for a mission-driven health system close to home in Orlando makes it more compelling, not less.

I care about the parts of this role that are easy to say and hard to do: experiences that feel simple and trustworthy, code that holds up, and the discipline to ship fast without dropping quality, accessibility, or security. To be straight about fit, I lead with React, Next, and Node rather than Python, and my cloud depth is strongest on the Vercel and Supabase side rather than AWS or Kubernetes, so I would ramp into your exact infrastructure. The product instinct, the end-to-end ownership, and the AI-native way of building are already how I operate.

I would value the chance to talk about where you are taking these healthcare platforms and where I can help build them.

Happy to talk - [Book a call](#)
