

Gary Hyde

Product Engineer Winter Garden / Orlando, FL | gary.robert.hyde@gmail.com | (407) 473-7206 | jobs.garyhyde.com

Summary

Product engineer who owns digital products end to end, from the PostgreSQL schema through the API to the React interface a user actually touches, in one continuous TypeScript stack. 14+ years building production web products, including multi-tenant SaaS platforms I architected for scale from day one. I move fluidly between UI and UX, API design, data modeling, and systems architecture, and I care as much about whether an experience feels simple and trustworthy as whether the code underneath it is clean. I have built AI into my daily workflow since the tools became usable, using it as a force multiplier to prototype and ship faster without lowering the bar. I built Pathara, an AI product that runs the job search for someone end to end, so building AI-powered platforms people rely on is exactly the work I want to keep doing. Orlando-based, biased toward ownership, craftsmanship, and shipping.

Core Skills

TypeScript (end to end), React, Next.js 14 (App Router), Node.js, Express, REST APIs, PostgreSQL, relational schema design, Drizzle ORM, Redis, BullMQ, webhook architecture, end-to-end product ownership, UI/UX sensibility, accessibility, performance, AI-augmented development, AI agent pipelines, prompt engineering, Stripe + Stripe Tax, Tailwind CSS, shadcn/ui, Vercel, Railway, Docker, Git

Experience

SENIOR FULL-STACK DEVELOPER, FORWARD THINKING MARKETING (CHRONIC GURU)

Oct 2023 - May 2026

- Lead developer owning the full technical stack, from PostgreSQL schema and REST API design through the React interfaces and the storefronts running on top of them.
- Took features from a user problem to a shipped product with minimal oversight, scoping the work, building both the API and the interface, and owning the outcome.

- Introduced AI into the team's default way to build, compressing delivery while holding code quality, accessibility, and documentation standards.
- Built automated AI code-review tooling that synthesizes outputs from multiple models into structured Ship/Fix/No-Ship scorecards, raising the team's review bar.
- Architected and maintained multi-system integrations across order pipelines and inventory sync, resolving complex cross-platform data-consistency bugs.

LEAD DEVELOPER, GARY HYDE DEVELOPMENT (INDEPENDENT)

Jan 2013 - Present

- Built multi-tenant SaaS platforms on Next.js 14 App Router and TypeScript with Express, PostgreSQL and Drizzle ORM, BullMQ/Redis job queues, and Auth.js v5, production-architected and cloud-deployed from day one.
- Designed REST APIs, relational schemas, and background-job systems end to end, then carried them through to performant, accessible React frontends, owning every layer.
- Built a direct booking platform with guest portals, Stripe + Stripe Tax, webhook handling, and review workflows.
- Delivered product end to end across e-commerce, hospitality, professional services, and SaaS, owning discovery, design input, architecture, and delivery.

CO-OWNER / E-COMMERCE OPERATOR, POSH LOVE

Feb 2015 - Present

- Co-founded and run a custom-product e-commerce business, owning the storefront, infrastructure, fulfillment, and customer experience end to end.

WEB DEVELOPER, AAA (CONTRACT)

Aug 2012 - Jan 2013

- Diagnosed and resolved bugs in a roadside-assistance dispatch platform alongside the QA team.

Notable Projects

PATHARA, AI AGENT PRODUCT (GETPATHARA.COM)

A self-service product where someone submits a resume and a short questionnaire, and an automated AI agent pipeline returns ranked job matches with a tailored resume, cover letter, and interview prep for each, plus an application tracker. Built end to end: the intake experience, the agent pipeline, and the per-user results portal.

- **Stack:** Next.js (App Router), TypeScript, Vercel, Supabase (auth, Postgres with row-level security, storage), managed AI agents, PostHog
- **Highlights:** Per-user data isolation, per-run cost and token telemetry, and a managed-agent design that runs without self-hosted workers

TEETIMES, MULTI-TENANT SAAS BOOKING PLATFORM

OpenTable-inspired tee-time booking SaaS for golf country clubs, built engine-first with a multi-tenant architecture.

- **Stack:** Next.js 14 App Router, TypeScript, React, Express, PostgreSQL + Drizzle ORM, Auth.js v5, BullMQ + Redis, Tailwind CSS, shadcn/ui
- **Highlights:** One TypeScript stack from schema to UI, Redis-backed background jobs, multi-tenant data isolation, and a TDD task structure driving the build

KORA, DIRECT BOOKING ENGINE

A direct booking engine that lets service businesses take reservations on their own site instead of handing a marketplace a cut, with payments and a guest experience owned end to end.

- **Stack:** Node.js + Express, Next.js, TypeScript, PostgreSQL, Stripe + Stripe Tax
- **Highlights:** Stripe Tax scoped day one, webhook-driven payment flows, guest communications, and a review pipeline carried from schema to frontend

Education

B.S. Web Design and Development, Full Sail University A.S. Computer Programming, Valencia Community College
